

The CERM, **Center for the Study of Mediterranean Rivers**, is part of the University of Vic - Central University of Catalonia (UVic-UCC), and also the environmental area of the Ter River Museum.

Their purposes are the study, dissemination and conservation of the natural heritage of the Ter river and other freshwater environments*.

Activities:

Research in rivers and other freshwater environments, associated with ecological status and biodiversity assessments. It develops projects on ecological conservation and solutions for improving fish migration.

Land stewardship, ecological conservation and restoration of rivers and lagoons, by means of the signature of land stewardship agreements with public and private land owners and managers.

Environmental education and citizen awareness. Workshops, activities and naturalistic field trips aimed at all publics.

Museology in natural sciences, taking care of exhibitions and a natural history collection.
